

# The *e-LECTIVE LANGUAGE LEARNING* Computer Program

DESIGNED AND DEVELOPED by  
Sotirios Chascas, Rhodes, Greece and  
Jim Cummins, Toronto, Canada

e-Lective Language Learning enables ESL students to gain access to the curriculum and to harvest the language of academic success. Most ESL students quickly develop "survival English," the language of everyday conversation. However, they usually require **at least 5 years** (and frequently longer) to catch up in academic English, the language of textbooks, literature, and school subjects such as Science, Social Studies, etc.

Any text in electronic form can easily be imported into the e-Lective environment. e-Lective then provides the supports that students need to understand text that previously they could not have understood. **Difficult text is transformed into comprehensible input.**

The e-Lective learning system provides individualized support for each learner to harvest the language they have read and to deepen their understanding of academic vocabulary. Students are also supported in developing critical literacy; they learn how to read between the lines rather than just skim across the surface of the text.

For more information: [www.e-Lective.net](http://www.e-Lective.net) (after March 14)

***e-Lective is available for purchase at the ECIS ESL and Mother Tongue Conference!!***

***Special introductory offer - 5-license version available for the price of the single-license version (100 Euros).***
